PROFILE

Agentic AI developer with hands-on experience in building intelligent, scalable, and user-centric applications across AI, full-stack development, and blockchain domains. Built impactful projects including digital identity platforms and safety-focused navigation systems. Proficient in Java, Python, and Spring Boot, with strong foundations in machine learning, DSA, and problem-solving, aiming to create innovative real-world AI-driven solutions.

INTERNSHIPS

- Infosys Springboard** Aug 2025 – Nov 2025
Software Development Intern *Bangalore, India*
Developed a full-stack Personal Finance Tracker web application using Spring Boot and React, implementing secure authentication, budgeting features, and an interactive financial analytics dashboard for better user insights.
- MindView Technologies** Jun 2025 – Jul 2025
AI Development Intern *Coimbatore, India*
Built an AI-powered crop health monitoring system using satellite imagery and machine learning, and developed backend APIs with predictive analysis models to accurately detect and classify crop health conditions.

PROJECTS

- BlockCred – Blockchain-Based Digital Identity Platform** [Link](#)
Built a blockchain-based digital identity platform for India's informal and gig workers, addressing the lack of reliable employment records for over 90% of the workforce. Implemented a decentralized ID (DID) system using Polygon blockchain to create tamper-proof work records, and integrated Zero-Knowledge Proofs for privacy-preserving verification with offline QR-based validation.
- FemRoute AI – AI-Powered Women Safety Navigation** [Link](#)
Developed an AI-based route recommendation system that prioritizes safety over speed by analyzing crime data, traffic patterns, and time-based risk factors. Built personalized safety modes with segment-level risk detection on interactive maps, and implemented route comparison, real-time alerts, and emergency assistance features for enhanced user safety.
- AI-Powered Crop Health Monitoring System (Team Mini Project)** [Link](#)
Designed a system to analyze satellite imagery data for monitoring crop health and assisting farmers in identifying field-level issues. Applied machine learning models to improve prediction accuracy through spatiotemporal analysis, enabling better agricultural decision-making.
- Gatepass Management System** [Link](#)
Developed a digital gatepass management system to streamline student request and approval workflows within institutions. Implemented structured request handling and automated pass generation using TypeScript to improve efficiency and reduce manual processing.

EDUCATION

- **V.S.B Engineering College** 2027
B.E Computer and Communication Engineering Karur
CGPA: 9.15
- **Vidya Mandir School** 2023
Higher Secondary Education Tamil Nadu
Percentage: 95.75%

SKILLS

Languages: Java, Python, SQL
Frameworks: Spring Boot, REST APIs
Web: HTML, CSS, JavaScript
Tools: Agentic AI tools ,Git, Docker
Concepts: DSA, OOP, Machine Learning

CERTIFICATIONS

Agentic AI Core Functionality – Coursera
Generative AI Fluency – FuturePrimeSkills
DSA using Java – NPTEL
Java Programming – NPTEL
Cloud Computing – NPTEL
Java Backend Workflow – Coursera

ACHIEVEMENTS

Solved 100+ LeetCode, 130+ GeeksforGeeks, 50+ SQL problems
National and State-level player in Kabaddi and Netball
Silver Medal – SASTRA Project Expo

INTERESTS

Artificial Intelligence,AI tools exporing Hackathon Participation
Competitive Coding, Public Speaking,Bioplc Exploring
Reading Novel ,Sports

DECLARATION

I hereby declare that the information provided above is true and correct to the best of my knowledge and belief.
